BRYAN PAUL DE LEON

+63 962 673 5763 | @bryanpaul.careers@gmail.com

SUMMARY:

I build high-availability systems, drive modernization initiatives, and reduce cognitive load through automation. With a foundation in embedded systems and hardware-software integration, my experience allows me to work seamlessly between managing on-premise servers and architecting cloud-native solutions

WORK EXPERIENCE:

Platform Engineer | Rizal Commercial Banking Corporation **Mar 2026 - Present**

- Accelerated application modernization for 10+ development teams by driving DevOps adoption, optimizing CI/CD pipelines, and resolving workflow disruptions while providing guidance on best practices
- Automated repetitive operational workflows by developing reusable Python scripts, significantly reducing manual overhead and accelerating audits.
- Architected standardized deployment pipelines for cross-functional teams, driving faster software delivery and reducing deployment times by up to 50%
- Led knowledge enablement sessions across 10+ application development teams to communicate Platform Engineering updates, detailing the practical impacts of new workflows and resolving developer queries.
- Provided DevOps support for deployments, reviewing configurations and guiding developers to ensure full compliance with internal standards prior to deployment.

DevOps Lead | MaraLabs Inc. **Aug 2025 - Feb 2026**

- Assumed complete ownership of core infrastructure and system administration following a team departure, ensuring uptime and seamless operational continuity.
- Pioneered a company-wide monitoring and alerting infrastructure using **Prometheus**, **Grafana**, and **Sentry** integrated with Slack; reduced Mean Time to Recovery (MTTR) by enabling real-time detection and resolution of critical issues.
- Architected and provisioned bare-metal cloud environments and configured physical Linux servers for diverse workloads, including **Proxmox** and **LXC** for virtualization and **Laravel Forge** for managed server deployments.
- Spearheaded the migration of legacy infrastructure from end-of-life CentOS and MySQL to modern CloudLinux and MariaDB environments.
- Onboarded and mentored interns on modern DevOps practices, practical CI/CD tools, and automation workflows

DESIGN PROJECTS AND RESEARCHES:

Maturity Stage Classification for Mushroom Fruiting using Instance Segmentation **Sept 2024 – June 2025**

- Developed the notification feature using **Firebase** and **AWS S3** to store device push tokens, enabling timely alerts when ‘Ready’ mushrooms are detected. Implemented a 'selective cropping' feature that partitions the input into a grid, enabling localized processing to accurately identify and pinpoint areas.

TECHNICAL SKILLS:

Languages: Python, PHP, C++
Virtualization & DevOps: Docker, Kubernetes, Proxmox, LXC, GitLab CI/CD, Terraform
Cloud Computing: AWS, Azure, Digital Ocean, OVHcloud, cPanel
Embedded Systems: Arduino, Raspberry Pi
Observability: Grafana, Sentry, Dynatrace, ELK

CERTIFICATIONS

- **AWS Certified Cloud Practitioner –** Amazon Web Services
- **Containerization and Virtualization with Docker and Kubernetes** – DataCamp
- **Microsoft Certified: Azure Fundamentals –** Microsoft
- **Docker Foundation Professional Certificate** – Docker Inc.
- **DevOps Professional Certification** – PagerDuty
